

Veolia Group: Following a Holistic Road Map to Establish a True Intelligent Enterprise

Ecological transformation is the core mission of Veolia Group. The global environmental services company works hand in hand with all stakeholders impacted by rapid ecological change, understanding that its solutions can only work if they address environment, social, and economic challenges as an indivisible whole. This holistic approach has accelerated the creation and deployment of its industrial solutions worldwide, especially in one of Veolia's most important markets, Poland.

To speed transformation of Poland's energy, water, and wastewater systems, Veolia needs to transform its fragmented operations across 123 localities in the country into a single, integrated intelligent enterprise. And to get there, **Veolia takes a holistic approach**, combining innovative technology with wide stakeholder input and adoption to not only transform IT landscapes but the entire business culture.

Redefining Digital Transformation in Poland with One ERP

Thanks to RISE with SAP S/4HANA® Cloud

Before: Challenges and Opportunities

- Outdated on-premise ERP system no longer supports processes and inhibits further innovation
- Fragmented satellite systems require significant data reconciliation time and maintenance costs
- Need for agile ERP to securely deliver information to anyone, anywhere for informed, timely decisions
- Desire for a single solution that meets business harmonization and standardization requirements while supporting full range of cloud-enabled digital transformation and collaboration projects

Why SAP

- RISE with SAP S/4HANA® Cloud provides a consistent, repeatable transition road map to SAP S/4HANA Cloud for all levels of the company
- Transformation-as-a-service approach complements Veolia's vision to connect and manage business entities and their innovation efforts holistically
- Real-time process integration and data sharing accelerates Veolia's "Secure Any Time, Any Where, Any Device" initiative to empower employees worldwide with mobile collaboration tools
- Expertise from SAP Service and Support, based on SAP Activate and SAP Advanced Deployment service to orchestrate involved partners and align different project streams

After: Value-Driven Results

- IT and finance resources freed up due to a simplified IT landscape that needs less maintenance
- Light, scalable, and secure cloud infrastructure supporting employee hybrid work and mobile devices
- Paperless operations, including digitalization of internal control and compliance processes
- Finance flexibility that enables rapid incorporation of legal and accounting changes

"The Veolia Group in Poland – with support of RISE with SAP S/4HANA Cloud – exemplifies how to **redesign processes holistically and effectively** and is leading the way for the entire industry."
